STONELEAF

THE INNOVATION: Real stone thin & flexible

Stone Leaf is a paper-thin real stone veneer. The 100% natural stone surface is enforced from the back with fiberglass for better stability and easy processing.

To produce Stone Leaf the most beautiful slate blocks from around the world are chosen: With our revolutionary method it's possible to produce many very thin stone layers from a massive slate blocks of up to 5 tons. During manufacturing the fiberglass carrier is applied in liquid form to the slate block and the thin stone layer is peeled off manually.

The paperthin slate by Stone Leaf is not only characterized by the beautiful natural colors and structures but also by it's other properties:

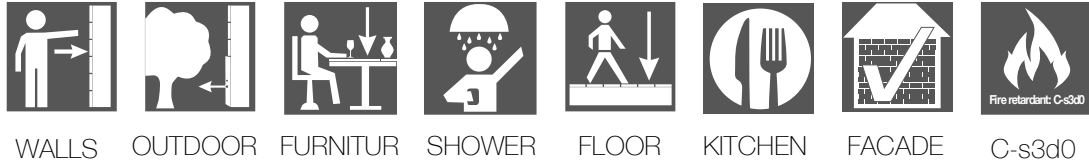

Stone Leaf is due to it's thinness completely flexible. Stone Leaf is also very light it weighs just 1,5 kg. per m² which also significantly reduces transport costs compared to massive stone slabs also helps to reduce the degradation of natural resources.

All chemical components of Stone Leaf are harmless health and correspond to the highest quality standards

SPECIFICATIONS

- 100% natural stone surface
- Harder and stronger than stone tiles by reinforcing with polyester resin
- Thickness: 1,5 - 2,0 mm
- Weight: approx. 1,5 kg/m²
- Standard format: 1220 x 610 mm
- Large format: 2400 x 1200 mm
- Large format: 2600 x 1200 mm (on order)
- Tolerance: 1 - 2 mm in length and width
- Fire protection Cfl-s1 (EN 13501-01) / B1 (DIN 4102): Floors
- Fire retardant material available (Cd0s3): Walls
- Maximum Temperature 120 °C
- Abrasion class: PEI II: For areas with average traffic and low abrasion

SPECIFICS

- Extremely easy to transport
- Possible to lay directly onto tiles
- Supply of all stones available for many years ahead
- Easy to apply around corners and round objects
- Usable for all carrier materials: concrete, wood, metal, tiles, etc.
